The project organizes supplies for auto detailing. The user is allowed to view stock of chemicals and tools. There are two superclasses one a Tool one and a Chemical one. These superclasses are broken down further.

```
run:
Welcome to your detail garage.
Please input 'chemicals' for chemicals, 'tools' for tools or 'exit' to exit
tools
Which type of tools would you like to view? Please select 'brushes' 'towels' or 'applicators'
brushes
You have the following in stock:
wheel brush
interior brush
BUILD SUCCESSFUL (total time: 28 seconds)
```

Future ideas:

Allow user to “use” chemicals and tools so that their volumes and quality degrade

Allow user to restock chemicals or tools

Allow user to input new chemicals or tools from the console
